iPhone_SDK 说明文档 20140305

1.把 sdk 直接添加到 xcode 项目上面

2.添加 sdk 依赖的官方 framework

- ▶ ☐ CoreTelephony.framework
 ▶ ☐ SystemConfiguration.framework
 ▶ ☐ CoreLocation.framework
 ▶ ☐ MobileCoreServices.framework
 ▶ ☐ Security.framework
- 3.在开发者后台创建应用后, 拿到 apikey 和 apiSecret, 在 - (BOOL)application:(UIApplication *)application didFinishLaunchingWithOptions:(NSDictionary *)launchOptions

#import "BTAdvert.h"

用 [BTAdvert registerWithAPIkey:@"xxx" apiSecret:@"xxxx"]; 来注册 apikey 和 apiSecret (如果进入 app 的第一个 viewController 有添加广告, 则需要放在 viewController init 之前)

```
#import "BTAdvert.h"

@implementation AppDelegate

- (BOOL)application:(UIApplication *)application didFinishLaunchingWithOptions:(NSDictionary *)launchOptions

{

[BTAdvert registerWithAPIkey:@"d6bad5dc1fd511e3ba5e00163e000d1c" apiSecret:@"908a9cc2f5ad53c43ca388f8ae1b3791|];

self.window = [[UIWindow alloc] initWithFrame:[[UIScreen mainScreen] bounds]];

// Override point for customization after application launch.

self.viewController = [[ViewController alloc] initWithNibName:@"ViewController" bundle:nil];

self.window.rootViewController = self.viewController;

[self.window makeKeyAndVisible];

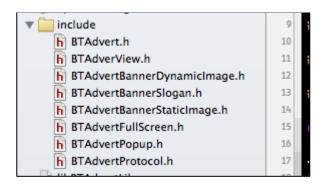

return YES;

}
```

[BTAdvert registerWithAPIkey:@"c3ae6a5a39b411e3ae3800163e000d1c" apiSecret:@"67ec7683749b76f895f047ac6d4bf300"];

4.广告对应的类:

- 1. 广告条(文字加图标) BTAdvertBannerSlogan.h
- 2.广告条(静态横幅图片) BTAdvertBannerStaticImage.h
- 3.广告条(动态横幅图片) BTAdvertBannerDynamicImage.h
- 4.全屏广告 BTAdvertBannerStaticImage.h
- 5.浮层广告 BTAdvertPopup.h

BTAdvertProtocol.h 中有 获取广告前 获取广告成功 获取广告失败 的回调 delegate

```
BTAdvertBannerStaticImage *advertBanner = [[BTAdvertBannerStaticImage alloc] initWithDelegate:self];
[advertBanner setFrame:CGRectMake(0.0, 50.0, 0.0, 0.0)];
[self.view addSubview:advertBanner];
[advertBannerSlogan *bannerSlogan = [[BTAdvertBannerSlogan alloc] initWithDelegate:self];
[bannerSlogan setFrame:CGRectMake(0.0, 150.0, 0.0, 0.0)];
[self.view addSubview:bannerSlogan];
[bannerSlogan start];

BTAdvertBannerDynamicImage *dynamicImage = [[BTAdvertBannerDynamicImage alloc] initWithDelegate:self];
[dynamicImage setFrame:CGRectMake(0.0, 250.0, 0.0, 0.0)];
[self.view addSubview:dynamicImage];
[dynamicImage start];

self.view addSubview:self.popupView];
[self.view addSubview:self.popupView];
[self.view addSubview:self.popupView];
[self.view addSubview:self.popupView];
[self.popupView start];
```

```
BTAdvertBannerStaticImage *advertBanner = [[BTAdvertBannerStaticImage alloc] initWithDelegate:self];
        [advertBanner setFrame:CGRectMake(0.0, 50.0, 0.0, 0.0)];
        [self.view addSubview:advertBanner];
        [advertBanner start];

        BTAdvertBannerSlogan *bannerSlogan = [[BTAdvertBannerSlogan alloc] initWithDelegate:self];
        [bannerSlogan setFrame:CGRectMake(0.0, 150.0, 0.0, 0.0)];
        [self.view addSubview:bannerSlogan];
        [bannerSlogan start];

        BTAdvertBannerDynamicImage *dynamicImage = [[BTAdvertBannerDynamicImage alloc] initWithDelegate:self];
```

[dynamicImage setFrame:CGRectMake(0.0, 250.0, 0.0, 0.0)]; [self.view addSubview:dynamicImage]; [dynamicImage start];

self.popupView = [[BTAdvertPopup alloc] initWithDelegate:self];
[self.view addSubview:self.popupView];
[self.popupView start];

self.advertFullScreen = [[BTAdvertFullScreen alloc] initWithDelegate:self];
[self.view addSubview:self.advertFullScreen];
[self.advertFullScreen start];

5种类型的广告添加和调用的方法都一样.

BTAdvertBannerStaticImage BTAdvertBannerSlogan BTAdvertBannerDynamicImage 可以由开发者控制 view 的 y 值

BTAdvertPopup BTAdvertFullScreen 默认大小是全屏

start 方法是开始向服务器循环获取广告, 当你需要移除广告的时候, 调用

[self.advertFullScreen removeFromSuperview];

[self.advertFullScreen removeFromSuperview];

就可以.

stop 方法是暂停向服务器获取广告

start stop 应该添加上去 viewController viewWillDisappear viewWillAppear 方法中

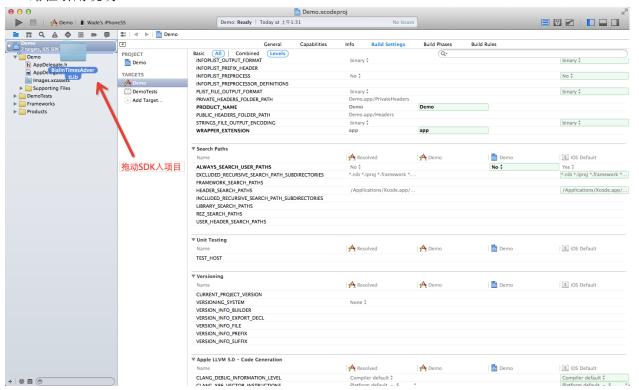

```
    - (void)viewWillDisappear:(BOOL)animated {
        [self.dynamicImage stop];
    }

    - (void)viewWillAppear:(BOOL)animated {
        [self.dynamicImage start];
    }
```

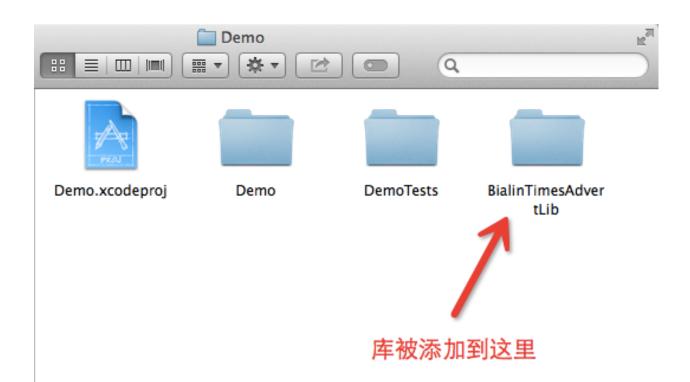

```
    - (void)fullScreenButtonPress {
        [self.advertFullScreen start];
}
    - (void)floatScreenButtonPress {
        [self.popupView start];
}
```

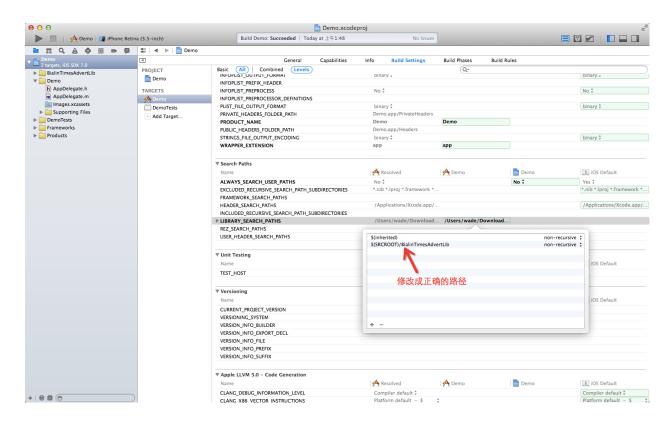

特别说明:

1. 路径引用说明

2. 编译配置特别说明:
